EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to an applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The following changes have been made in a subject of the application to place the claims in a condition for allowance:

Claim

In claim 19:

- Line 12, inserted --the-- after "and".

In claim 43:

- Line 19, inserted --the-- after "and".

The above change was made to place the application in better condition for allowance.

REASONS FOR ALLOWANCE

The following is an Examiner's Statement of Reasons for Allowance:

Claims 1-18 are allowed because none of the prior art references of record teaches a print carriage and ink supply system for a printer comprising a pendulum that is pivotally coupled to the print carriage for pivotal movement with respect to a print carriage in reaction to acceleration of the print carriage laterally along a print medium, the pendulum being mechanically linked to a pump actuator; whereby the pendulum actuates the pump at least upon certain accelerations of the print carriage laterally along the print medium in the combination as claimed.

Art Unit: 2861

Claims 19-42 are allowed because none of the prior art references of record teaches a print carriage and ink supply system for a printer comprising an inertial mass that is coupled to a print carriage for reciprocating movement with respect to the print carriage in opposing reaction to acceleration of the print carriage laterally along a print medium; the inertial mass being indirectly linked to a pump actuator by a mechanical linkage; whereby the combination of the inertial mass and the mechanical linkage actuates the pump at least upon certain accelerations of the print carriage laterally along the print medium in the combination as claimed.

Claims 43-54 are allowed because none of the prior art references of record teaches a printer comprising an inertial mass that is coupled to the print carriage for reciprocating movement with respect to a print carriage in opposing reaction to acceleration of the print carriage laterally along the print medium; and a mechanical advantage linkage coupling the inertial mass to the pump actuator; whereby the combination of the inertial mass and the mechanical advantage linkage actuates the pump at least upon certain accelerations of the print carriage laterally along the print medium in the combination as claimed.

Citation of Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art reference (us Pat. 4,429,320; US Pat. 5,871,291; US Pat. 5,777,646; US Pat. 6,224,198; US Pat. 5,320,250 and US Pat. 5,721,576) cited in the PTO 892 form show an ink refilling apparatus that is deemed to be relevant to the present invention. This reference should be reviewed.

CONCLUSION

Any comments considered necessarily by applicant must be submitted no later than the payment of the Issue Fee and, to avoid processing delays, should preferably accompany the Issue

Art Unit: 2861

Fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
